## **DETAILED ACTION**

### ***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-24, drawn to nucleic acids, classified in class 536, subclass 22.1.
  - II. Claims 25-29, drawn to polypeptides, classified in class 536, subclass 350.
  - III. Claims 30-40, drawn to method of nucleic acid hybridization, classified in class 435, subclass 6.
  - IV. Claims 41-50, drawn to plants, classified in class 800, subclass 200.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II, IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of nucleic acids of Group I are not disclosed as capable of use together with polypeptides of Group II and plants of Group IV and they have different modes of operation, different functions, or different effects.
3. Inventions of Groups I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP §

Art Unit: 1634

806.05(h)). In the instant case the nucleic acids of Group I can be used in the nucleic acid hybridization of Group III or can be used to make RNA and protein or can be used to make antisense nucleic acid for gene therapy..

4. Inventions of Groups II and III-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions of polypeptides of Group II is not disclosed as capable of use together with the nucleic acid hybridization of Group III and plants of Group IV and they have different modes of operation, different functions, or different effects.

5. Inventions of Groups III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions of the nucleic acid hybridization of Group III is not disclosed as capable of use together with the plants of Group IV and they have different modes of operation, different functions, or different effects.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1634

7. Claims 1-50 are generic to a plurality of disclosed patentably distinct species comprising 3537 nucleotide sequences. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

8. A telephone call was made to Raymond Stewart on June 11, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CAR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CAR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CAR 1.48(b) and by the fee required under 37 CAR 1.17(I).
